Save Time, Act Fast: Stay Ahead
With Action-Ready Automotive
Threat Intelligence

Why Today's Threat Intelligence (TI) Platforms Create More Work

Many TI platforms claim “actionable” insights, but leave OEMs and suppliers with complex, manual work.

Just a Feed, No Insight

Endless scrolling through intel feeds often leads to: “Now what?” Valuable context is buried under noise, leaving teams to manually piece together attack paths. Shouldn't insight come built in?

Secondhand Data, No Control

Dark web intelligence often comes secondhand, with unclear sources and no direct access. The analysis remains surface-level, lacking verification or update tracking — making threat response more difficult.

Too Much Noise, No Priority

“Thousands of sources” sounds impressive — until you're drowning in irrelevant data. Without a focused risk profile, critical threats get lost in the clutter. Why sift through noise when you could act on what matters?

Save Time, Act Fast

VicOne's automotive TI platform, xAurient, is purpose-built for the industry — turning information into action, not extra work. It delivers clear steps to strengthen product security and keep you ahead.

Feature Highlights

- Map contextualized attack paths instantly:** Identify adversaries' TTPs, motives, targets, and vulnerabilities — and respond with speed and clarity.
- Gain end-to-end visibility into product risks:** Monitor thousands of sources, from the dark web to social platforms, to uncover threats with unmatched breadth and depth.
- Prioritize risks with precision:** Use AI or custom controls to build tailored risk profiles and focus on the most critical threats.
- Scale seamlessly for long-term protection:** Integrate with VSOC, VMS, and IDPS platforms to enable cost-effective, lifecycle-wide defense.
- Get AI-powered threat reports automatically:** Receive regular, actionable updates in your inbox — saving time and enabling quicker decisions.
- Keep pace with standards and regulations:** Meet ISO/SAE 21434 and UN R155 requirements with insights aligned with compliance expectations.
